SUMMARY

Senior Quality Engineer with 4 years driving QA automation and AI powered testing for large scale web applications. Led initiatives that achieved 95% requirement coverage and cut manual testing effort by 40% using Selenium (C#) and BDD frameworks. Architected Chaos Testing and Error Budget Monitoring strategies, which reduced production defects by 20% and improved system stability by 50%, while leveraging GenAI tools to cut test creation time by 30% and enhance visual testing.

SKILLS

QA & Testing Methodologies: Functional Testing, Regression Testing, Integration Testing, UAT, End to End Testing, Chaos Testing, Error Budget Monitoring, Shift Left Testing, Agile/Scrum, Manual Testing, Test Management, Project Management, SDLC

Test Automation & Frameworks: Selenium (Java, C#), Playwright, BDD, Cucumber, TestNG, NUnit, JUnit, Java, UI Automation, Automation

AI Powered QA Tools: GitHub Copilot, TestRigor, AI driven QA

API & Data Testing: Postman, SQL, NoSQL

DevOps & CI/CD: Azure DevOps, Jenkins, GitHub Actions

Monitoring & Observability: Splunk, AppDynamics, DataDog

EXPERIENCE

LTIMINDTREE

Hyderabad

SENIOR QUALITY ENGINEER

May 2024 – Present

- Designed and implemented Java based automation frameworks using Playwright, increasing test execution speed by 45% and achieving 98% test suite stability across cross browser environments, utilizing Analytical Skills to optimize test suites and ensure near complete coverage.
- Owned and managed QA and UAT environments end to end, leading test management activities including test planning, execution tracking, and metrics reporting while utilizing Project Management skills to coordinate build deployments and support release planning, ensuring zero critical production failures across 10+ major releases, and employing Communication Skills to collaborate with cross functional teams and stakeholders.
- Designed and implemented Chaos Testing and Error Budget Monitoring using Splunk, AppDynamics, and DataDog, reducing production vulnerabilities by 20% and improving overall system resilience and stability by 50%, and applied Analytical Skills to analyze test results and identify areas for improvement, utilizing C and Java programming languages.
- Championed Shift Left Testing practices, identifying defects 3x earlier in the SDLC and improving product quality scores by 30% — significantly reducing the cost of late stage bug fixes.
- Actively contributed to Agile ceremonies across 8+ sprints, driving on time delivery with 5% regression escape rate per release cycle.
- Developed peer group analysis dashboards and reporting workflows, translating test results into clear visual summaries for stakeholders; this communication enhanced data driven decisions and improved reporting accuracy by 40%.
- Utilized TestRigor's visual testing capabilities to identify UI inconsistencies, reducing cosmetic defect leakage to production by 60% and ensuring a polished end user experience.
- Utilized SQL to develop and execute queries for data validation, ensuring data integrity and consistency across distributed systems, and applied UML to design and visualize system architecture, resulting in improved system scalability and maintainability.
- Developed and executed comprehensive test plans, utilizing Regression Testing and API Testing techniques, including REST and Soap, to ensure near complete coverage of system functionality, resulting in a 30% reduction in defects and a 25% improvement in test efficiency.
- Collaborated with development teams to implement automated testing using Java and C, resulting in a 40% reduction in manual testing effort and a 30% improvement in test suite maintainability, and utilized Scrum framework to facilitate Agile ceremonies and ensure timely delivery of high quality software products.
- Utilized UI testing techniques to identify and report defects, resulting in a 25% reduction in UI related defects and a 20% improvement in overall system usability, and applied Analytical Skills to analyze test results and identify areas for improvement, utilizing Java and C programming languages.

LTIMINDTREE

Hyderabad

QUALITY ENGINEER

May 2022 – Apr 2024

- Led end to end QA for large scale web applications, translating complex business requirements into 200+ detailed test scenarios across functional, regression, integration, and UAT phases — achieving 95% requirement coverage.
- Designed and executed automation frameworks using Selenium with C#, implementing BDD with Cucumber, reducing manual testing effort by 40% and enabling reusable, maintainable test suites.
- Conducted comprehensive API and Web Services testing using Postman, validating 50+ backend integrations and ensuring data integrity across distributed systems — cutting integration defects by 35%.
- Applied SQL queries to validate data consistency and troubleshoot backend issues, resolving 90% of data related defects before UAT — reducing backend related escalations significantly.
- Collaborated with cross functional teams to triage defects and conduct root cause analysis, achieving an average defect resolution time improvement of 25%.
- Leveraged GitHub Copilot for AI assisted test case development, cutting test creation time by 30% and minimizing errors in requirements validation.

EDUCATION

BHARATH INSTITUTE OF HIGHER EDUCATION AND RESEARCH

Chennai

ACHIEVEMENTS

- Shooting Star Award: Recognized for adaptability and enthusiasm in pioneering AI driven QA practices across the team.
- Super Crew Award: Awarded for exceptional cross module collaboration and knowledge sharing.
- Hi Five Award: Honored for impactful contributions to product quality, innovation, and delivery excellence.
- Shooting Star Award: Recognized for exceptional adaptability in rapidly restructuring end to end application workflows to deliver seamless milestone demonstrations to customers, ensuring a smooth and impactful client experience under tight timelines.
